

OUR VISION IS SIMPLE

EVERY CHILD WHO FINISHES T.H.Y.N.K SHOULD BE ABLE TO:

EXPLAIN

Both to another person — in their own words.

EXPRESS

That same solution as working code on a screen.

SOLVE

A problem step-by-step in their head using a Vedic sutra.

USE SCREEN TIME

For the right purpose — to create, not just consume.

THINK TODAY, LEARN SMART LEAD TOMORROW

WHAT IS T.H.Y.N.K?

A MODERN LEARNING HUB FOR FUTURE-READY MINDS.

The name says it all: **The Hub for Young Next-gen Knowledge** — pronounced THINK, because that is exactly what every session is designed to develop.

T.H.Y.N.K empowers young minds with future-ready skills through a unique blend of **Vedic Mathematics, Coding, Logical Reasoning, Problem Solving and Creative Thinking**. It creates an engaging environment where students build confidence, sharpen analytical abilities, and develop a lifelong love for learning.

T.H.Y.N.K is an ongoing school program in IT / Computers for **Grades 4 to 7** — delivered once a week, entirely through your school's existing computer lab and teachers.

THE CORE IDEA

TWO LANGUAGES. THE SAME KIND OF THINKING.

A Vedic sutra is a rule you follow step by step to reach an answer. An algorithm is a rule you follow step by step to reach an answer. T.H.Y.N.K makes that connection visible, explicit, and exciting.

VEDIC MATHS

Mental arithmetic shortcuts drawn from sixteen ancient sutras — 3–5× faster computation, sharper number sense, and structured logical thinking.

COMPUTER PROGRAMMING

Visual coding in Scratch (Gr 4–5) and real web programming with HTML, CSS & JavaScript (Gr 6–7) — the foundations of every modern application.

Kids form their own questions using AI. Students learn to turn their curiosity into prompts, and their prompts into working code — making AI their thinking partner, not their answer machine. The Teacher Guide includes a dedicated chapter on age-appropriate AI prompting.

OUR VISION FOR YOUR SCHOOL

WHY EVERY CHILD MUST LEARN TO CODE.

By 2030, every job will have a digital component. A child who cannot read code in 2030 will be at the same disadvantage as a child who could not read English in 2000. **Coding is the new literacy of thinking.**

1 STRUCTURED THINKING

Break big problems into small steps, test, and fix a skill that transfers to every subject.

2 CREATORS, NOT CONSUMERS

Children flip from playing apps to making them changing how they see technology forever.

3 RESILIENCE

Code rarely works the first time. Every project builds patience and a calm-under-failure mindset.

4 FUTURE-PROOFING

AI replaces those who can't work with it. Students who code can direct AI, not be directed by it.

5 NEP 2020 ALIGNED

Structured, measurable, audit-ready delivery of computational thinking from middle school onward.

6 STRONGER ACADEMICS

Research shows measurable gains in maths, reading and reasoning within 6–12 months of coding.

WHY THIS MATTERS FOR SCHOOLS

A PROGRAM BUILT FOR THE REALITIES OF INDIAN SCHOOLS.

- Builds on what you already teach**
All schools introduce Vedic Maths in middle school. T.H.Y.N.K deepens that foundation into something practical and modern.
- Meets the NEP 2020 mandate**
NEP 2020 requires coding from Grade 6. T.H.Y.N.K gives schools a structured, ready-to-deliver way to fulfil this without hiring specialist coding teachers.
- 3-5X faster mental computation**
Vedic techniques boost mental calculation speed, leading to faster debugging, stronger logic, and greater coding confidence.
- Pride in India's mathematical heritage**
Ancient Vedic math meets modern coding, empowering confident learners.

THE BRIDGE

FIVE DIRECT SUTRA-TO-CODE CONNECTIONS.

Vedic Sutra	Meaning	Coding Concept
Ekadhikena Purvena	By one more than the previous	Loops — repeatblocks for / while
Nikhilam	All from 9, last from 10	Variables — storing intermediate values
Urdhva Tiryakbhyam	Vertically and crosswise	Nested loops — processing every position
Gunita Samuchaya	Product of sum = sum of product	Debugging — verification via digital roots
Anurupyena	Proportionality	Functions & CSS — write once, scale infinitely

THE PROGRAM · TRACK 1

GRADES 4 & 5: VEDIC MATHS + SCRATCH

Visual block-based coding from MIT — used by 100M+ children worldwide. Removes the typing barrier and lets students focus on logic and creativity.

What students actually learn in Scratch:

Sequencing & Events

Order, clicks, key presses
foundation of every program.

Loops

Repeat / forever — mapped to
Ekadhikena Purvena.

Variables & Lists

Storing numbers, scores, answers;
building a quiz that tracks score.

Conditionals

If / else — checking answers,
giving feedback.

Operators & Maths

Building actual Vedic algorithms
in Scratch's arithmetic blocks.

Sprites & Animation

Making maths visual —
numbers dance, sutras animate.

Custom Blocks

Packaging a sutra as a reusable
function—first taste of abstraction.

Sound & Storytelling

Recording their voice explaining a
sutra turns coding into teaching.

Broadcasting

Multi-sprite communication —
early event-driven programming.

By Week 24, students are no
longer just playing Scratch
projects, they are designing them.

THE PROGRAM · TRACK 2

GRADES 6 & 7: VEDIC MATHS + HTML | CSS | JAVASCRIPT

Real web programming — the exact three languages used to build every website on the internet, from Google to Instagram. No toys, no training wheels. What students actually learn:

HTML · Structure

Tags, elements, attributes, headings, lists, images, forms & inputs, semantic layout (<header>, <section>, <footer>).

CSS · Style

Selectors, the Box Model, colours, fonts, Flexbox & Grid, responsive design for phones & tablets, animations and transitions.

JavaScript · Brain

Variables, conditionals, loops, functions, arrays & objects, DOM manipulation, event handling, debugging with the browser console.

By Week 24, students can open any website in the world, right-click "Inspect", and understand exactly what they're looking at — years ahead of their peers.

LOGISTICS

A PROGRAM THAT RUNS ON WHAT YOUR SCHOOL ALREADY HAS.

WE PROVIDE

24 Teacher Guides — full lesson plans, both tracks, Vedic background, common mistakes, extensions

24 Student Worksheets — warm-up, guided exercise, reflection, take-home activity

Scratch Starter Files — pre-built .sb3 for every Gr 4–5 session

HTML / CSS / JS Templates — starter code for every Gr 6–7 session

Assessment Kit — weekly checklists, rubrics, progress tracker, certificate template

One-Day Teacher Training — delivered on-site before launch

SCHOOL PROVIDES

Computer Lab — Windows / Mac, 1 PC per 2 students, Chrome browser

Computer Teacher — existing staff, no Vedic Maths background required

Time — 35 minutes once a week × 24 weeks (Saturdays work perfectly)

Students — 15–30 per batch, Grades 4–5 or 6–7

Feedback — midpoint & end-of-year teacher input

NO NEW HARDWARE.
NO NEW SOFTWARE LICENCES.
NO SPECIALIST HIRING.

STUDENT PRICING

HONEST PRICING. ZERO SURPRISES.

One registration, one annual fee, that's it. No upsells, no hidden charges, no "Premium Tier." Built so every family in your school can say yes.

ANNUAL PROGRAM FEE

₹ 3,600

FULL ACADEMIC YEAR

REGISTRATION ₹ 500 ONE-TIME

Just ₹ 150 per session — less than one private tuition class, for a full year of coding + Vedic Maths + AI fluency.

WHAT'S INCLUDED IN THE ANNUAL FEE

24 weekly sessions — full academic year

All Student Worksheets — one per session

Scratch starters + HTML/CSS/JS templates

AI prompting guide — age-appropriate, supervised

End-of-year Certificate — printable

A REVENUE-SHARE PARTNERSHIP FOR YOUR SCHOOL 20–25%

We share **20–25% of the annual program fee** with the school as a partnership contribution — negotiable based on cohort size and engagement. T.H.Y.N.K isn't just a vendor program; it's a **shared revenue stream** that supports your lab, your teachers, and your school's investment in future-ready learning — all while delivering a flagship program at zero capital cost.
